¹The Fund's Index, *The Russell 2500 Growth™ Index*, measures the performance of the small and mid-cap growth segment of the U.S. equity universe. It includes those Russell 2500 Index companies with higher price-to-value ratios and higher forecasted growth values. One cannot invest directly into an index.

²Performance is annualized.

³Since inception returns are calculated using the Fund's Legacy class inception date of 08.01.1984.

Principal Investment Risks

The Investment Adviser uses the Fund's principal investment strategies to achieve the Fund's investment objective of long-term growth of capital. There is no assurance that the Investment Adviser's investment strategies or securities selection method will achieve that investment objective. Equity securities fluctuate in price and value in response to many factors including historical and prospective earnings of the issuer and its financial condition, the value of its assets, general economic conditions, interest rates, investors' perceptions and market liquidity. The stock prices of small and mid-capitalization and newer companies tend to fluctuate more than those of larger capitalized and/or more established companies and generally have a smaller market for their shares than do large capitalization companies. There are risks involved with any investment. There are principal risks associated with an investment in the Fund, which could adversely affect its net asset value, yield and return. Please see the section "Further Information About Principal Risks" in the Prospectus for a more detailed discussion of these risks and other factors you should carefully consider before deciding to invest in the Fund. *An investment in the Fund may lose money and is not a deposit of a bank or insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency.*

Glossary:

Alpha: A measure of performance on a risk-adjusted basis. Alpha compares the volatility (price risk) of the Fund to risk-adjusted performance of the benchmark Index. **Beta:** A statistical measure of the Fund's volatility relative to the broader peer group is measured against the benchmark Index, which is deemed to equal 1.00. **Standard Deviation:** Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk. **Sharpe:** Measures risk-adjusted performance. **Number of Holdings:** The total number of individual equities held by the Fund. **Weighted Average Market Cap:** The weighted average of market capitalization (market price multiplied by the number of shares outstanding) of the stocks in the portfolio, weighted according to its percent held in the fund. **Price to Earnings:** A valuation ratio of current share price compared to its per-share operating earnings over the previous four quarters. **Price to Book:** A ratio used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share. **Price to Sales:** A ratio for valuing a stock relative to its own past performance, other companies or the market itself. Price to sales is calculated by dividing a stock's current price by its revenue per share for the trailing 12 months. **Price to Cash Flow:** A measure of the market's expectations of a firm's future financial health. Because this measure deals with cash flow, the effects of depreciation and other non-cash factors are removed.
